(57) A 1,3-thiazole compound substituted at the 5-position by a pyridyl group optionally having substituent(s) has a superior p38 MAP kinase inhibitory activity and TNF- α production inhibitory activity.

Description

Technical Field

5 [0001] The present invention relates to superior p38 MAP kinase inhibitors, selective phosphodiesterase IV (PDE IV) inhibitors and the like. More particularly, the present invention relates to a pharmaceutical agent containing a 1,3-thiazole compound having a prophylactic or therapeutic activity of cytokine-mediated diseases, based on a p38 MAP kinase inhibitory activity, a TNF- α production inhibitory activity, a phosphodiesterase (PDE) inhibitory activity and the like.

10

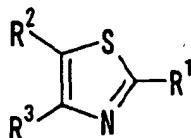

Background Art

15 [0002] Cytokines such as TNF- α (tumor necrosis factor- α), IL-1 (interleukin-1) and the like are biological substances which are produced by a variety of cells such as monocyte or macrophage in response to the infection and other cellular stress (Koj, A., *Biochim. Biophys. Acta*, 1317, 84-94 (1996)). Although these cytokines play important roles in the immune response when they are present at an appropriate amount, it is thought that the overproduction is associated with a variety of inflammatory diseases (Dinarello, C.A., *Curr. Opin. Immunol.*, 3, 941-948 (1991)). p38 MAP kinase which was cloned as a homologue of MAP kinase is involved in the control of production of these cytokines and signal transduction system coupled with receptors, and there is a possibility that the inhibition of p38 MAP kinase provides a drug for treating inflammatory diseases (Stein, B., Anderson, D., *Annual Report in Medicinal Chemistry*, edited by Bristol, J.A., Academic Press, vol.31, pages 289-298, 1996).

20 [0003] As compounds having a p38 MAP kinase inhibitory activity, imidazole derivatives are described in JP-T 7-50317 (WO 93/14081) and oxazole derivatives are described in JP-T 9-505055 (WO 95/13067), respectively.

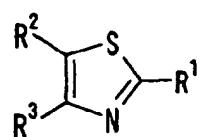

25 [0004] On the other hand, as thiazole compounds, the following compounds are known:

55 3) 1,3-thiazole derivatives represented by the formula:

15 [0461] Cloning of human p38 MAP kinase gene was performed by a PCR method using a primer set P38-U: 5'-ACCACTCGAGATGGACTACAAGGACGACGATGACAAGTCTCAGGAGAGGCCACGTTCTACC-3' [SEQ ID NO:1] and P38-L: 5'-ACCCGGTACCAACCAGGTGCTCAGGACTCCATCTCT-3' [SEQ ID NO:2] made by the use of kidney cDNA (Toyobo, QUICK-Clone cDNA) as a template and referring to the base sequence of p38 MAP kinase gene reported by Han et al. (Science 265 (5173), 808-811 (1994)).

20 [0462] A PCR reaction was performed by a Hot Start method using AmpliWax PCR Gem 100 (Takara Shuzo). As the lower mixed solution, 2 μL 10×LA PCR Buffer, 3 μL 2.5 mM dNTP solution, each 2.5 μL of 12.5 μM primer solutions, and 10 μL sterile distilled water were mixed. As the upper mixed solution, 1 μL human cardiac cDNA (1 ng/mL) as a template, 3 μL 10×LA PCR Buffer, 1 μL 2.5 mM dNTP solution, 0.5 μL TaKaRa LA Taq DNA polymerase (Takara Shuzo), and 24.5 μL sterile distilled water were mixed. One AmpliWax PCR Gem 100 (Takara Shuzo) was added to the prepared lower mixed solution and the mixture was treated at 70°C for 5 min and for 5 min in an ice bath, thereafter, the upper mixed solution was added to prepare a reaction solution for PCR. A tube containing the reaction solution was set at a thermal cycler (Perkin Elmer), which was treated at 95°C for 2 min. Further, after repeating 35 times a cycle of 15 seconds at 95°C and 2 minutes at 68°C, treatment was performed at 72°C for 8 minutes. The resulting PCR product was subjected to agarose gel (1%) electrophoresis, 1.1 kb DNA fragment containing p38 MAP kinase gene was recovered from the gel and, thereafter, which was inserted into pT7Blue-T vector (Takara Shuzo) to make the plasmid pHp38.

25 [0463] The 4.8 kb Xhol-KpnI fragment of the plasmid pFASTBAC1 (CIBCOBRL) and the 1.1 kb Xhol-KpnI fragment of the above plasmid pHp38 were ligated to make the plasmid pFBHP38.

30 [0464] The plasmid pFBHP38 and BAC-TO-BAC Baculovirus Expression System (GIBCOBRL) were used to prepare the recombinant baculovirus virus stock BAC-HP38.

(2) Cloning of human MKK3 gene and preparation of recombinant baculovirus

35 [0465] Cloning of human MKK3 gene was performed by a PCR method using a primer set MKK-U: 5'-ACAAGAATTCTATAACATATGGCTCATCATCATCATCATCATTCCAAGGCCACCGCACCCAA-3' [SEQ ID NO:3] and MKK-L: 5'-TCCCGTCTAGACTATGAGTCTTCTCCAGGAT-3' [SEQ ID NO:4] made by the use of kidney cDNA (Toyobo, QUICK-Clone cDNA) as a template and referring to the base sequence of MKK3 gene reported by Derijard, B. et al., (Science 267 (5198), 682-685 (1995)).

40 [0466] A PCR reaction was performed by a Hot Start method using AmpliWax PCR Gem 100 (Takara Shuzo). As the lower mixed solution, 2 μL 10×LA PCR Buffer, 3 μL 2.5 mM dNTP solution, each 2.5 μL of 12.5 μM primer solutions, and 10 μL sterile distilled water were mixed. As the upper mixed solution, 1 μL human kidney cDNA (1 ng/mL) as a template, 3 μL 10×LA PCR Buffer, 1 μL 2.5 mM dNTP solution, 0.5 μL TaKaRa LA Taq DNA polymerase (Takara Shuzo) and 24.5 μL sterile distilled water were mixed. One AmpliWax PCR Gem 100 (Takara Shuzo) was added to the prepared lower mixed solution and the mixture was treated at 70°C for 5 minutes and for 5 minutes in an ice bath, thereafter, the upper mixed solution was added to prepare a reaction solution for PCR. A tube containing the reaction solution was set at a thermal cycler (Perkin Elmer), which was treated at 95°C for 2 minutes. Further, after repeating 35 times a cycle of 15 seconds at 95°C and 2 minutes at 68°C, treatment was performed at 72°C for 8 minutes. The resulting PCR product was subjected to agarose gel (1%) electrophoresis, 1.0 kb DNA fragment containing MKK3 gene was recovered from the gel and, thereafter, which was inserted into pT7Blue-T vector (Takara Shuzo) to make the plasmid pHMKK3.

45 [0467] In order to mutate MKK3 into a constitutive active form (from Ser to Glu at 189 position, from Thr to Glu at position 193), a primer set SER-U: 5'-GGCTACTTGGTGGACGAGGTGGCCAAGGAGATGGATGCCGGCTGC-3' [SEQ ID NO:5] and SER-L: 5'-GCAGCCGGCATCCATCTCCTGGCCACCTCGTCCACCAAGTAGCC-3' [SEQ ID NO:6] was used to introduce a mutation by QuikChange Site-Directed Mutagenesis Kit (Stratagene), to obtain pcamKK3.

50 [0468] 4.8 kb EcoRI-XbaI fragment of the plasmid pFASTBAC1 (CIBCOBRL) and the 1.0 kb EcoRI-XbaI fragment of the above plasmid pcamKK3 were ligated to make the plasmid pFBcaMKK3.

55 [0469] The plasmid pFBcaMKK3 and BAC-TO-BAC Baculovirus Expression System (GIBCOBRL) were used to pre-

pare the recombinant baculovirus virusstock BAC-caMKK3.

(3) Preparation of active form p38 MAP kinase

5 [0470] The Sf-21 cells were seeded on 100 mL Sf-900II SFM medium (GIBCOBRL) to 1×10^6 cells/mL and cultured at 27°C for 24 hours. After each 0.2 mL of the virusstock BAC-HP38 and BAC-caMKK3 of recombinant baculovirus were added, the culturing was further performed for 48 hours. After the cells were separated from the culturing solution by centrifugation (3000 rpm, 10 min), the cells were washed twice with PBS. After the cells were suspended in 10 mL Lysis buffer (25 mM HEPES (pH 7.5), 1% Triton X, 130 mM NaCl, 1 mM EDTA, 1 mM DTT, 25 mM β -glycerophosphate, 20 mM leupeptin, 1 mM APMSF, 1 mM Sodium orthovanadate), the cells were lysed by treating twice in a homogenizer (POLYTRON) at 20000 rpm for 2 minutes. From the supernatant obtained by centrifugation (40000 rpm, 45 minutes), active form p38 MAP kinase was purified using Anti-FLAG M2 Affinity Gel (Eastman Chemical).

15 (4) Measurement of the enzyme inhibitory activity

20 [0471] 2.5 μ L of a test compound dissolved in DMSO was added to 37.5 μ L reaction solution (25 mM HEPES (pH 7.5), 10 mM Magnesium Acetate) containing 260 ng active form p38 MAP kinase and 1 μ g Myelin Basic Protein, which was maintained at 30°C for 5 minutes. The reaction was initiated by adding 10 μ L ATP solution (2.5 μ M ATP, 0.1 μ Ci [g- 32 P]ATP). After the reaction was performed at 30°C for 60 minutes, the reaction was stopped by adding 50 μ L 20% TCA solution. After the reaction solution was allowed to stand at 0°C for 20 minutes, an acid insoluble fraction was transferred to GF/C filter (Packard Japan) using Cell Harvester (Packard Japan) and washed with 250 mM H_3PO_4 . After drying at 45°C for 60 minutes, 40 μ L Microscint 0 (Packard Japan) was added and the radioactivity was measured with a TopCount (Packard Japan). The concentration (IC_{50} value) of the test compound necessary for inhibiting uptake of 32 P into an acid insoluble fraction by 50% was calculated with PRISM 2.01 (Graphpad Software). The results are shown in Table 45.

40 Measurement of inhibiting activity of TNF- α production

45 [0472] After THP-1 cells which had been cultured on PRMI 1640 medium (manufactured by Life Technologies, Inc.) containing 1% inactivated bovine fetal serum (manufactured by Life Technologies, Inc., U.S.A.) and 10 mM HEPES (pH 7.5) seeded on a 96-well plate to 1×10^5 cells/well, 1 μ L test compound dissolved in DMSO was added. After incubation at 37°C for 1 hour in a CO_2 incubator, LPS (Wako Pure Chemicals) was added to the final concentration 5 μ g/mL. After cultured at 37°C for 4 hours in a CO_2 incubator, the supernatant was obtained by centrifugation. The concentration of TNF- α in the supernatant was measured by ELISA (R&D Systems, Quantikine Kit). The concentration (IC_{50} value) of the test compound necessary for inhibiting TNF- α production by 50% was calculated using PRIMS 2.01 (Graphpad Software). The results are shown in Table 46.

INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP00/05198

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. Claims Nos.: 21-24
because they relate to subject matter not required to be searched by this Authority, namely:
The inventions as set forth in claims 21 to 24 pertain to methods for treatment of the human body by therapy.
2. Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest The additional search fees were accompanied by the applicant's protest.
 No protest accompanied the payment of additional search fees.
